

## **Trailer Demonstration**

Employees of the industrial workforce, around the world benefit from, and take pleasure in learning from Safety Connection, Inc.'s hands-on presentations. Our mobile test trailer will arrive at your site, equipped with a drop test stand, and force measuring instruments; in order to demonstrate the arresting forces in which workers may experience during a fall. We also demonstrate how to use, care for, and maintain your safety equipment.

This demonstration lasts approximately 45 minutes to 1 hour and requires the following provisions:

- Electrical outlet (110v)
- Secluded, covered area (away from the weather and external noise)
- Allotted demonstration area will need to accommodate the trailer dimensions which are: 12.5ft x 7.5ft and a height requirement of at least 15ft for the purpose of a boom which extends vertically.
- Please provide us with a map or directions to your site.

NOTE: Please be advised that this does not meet OSHA requirement 1926.503; it is a product demonstration only; not a training class.
